Project Problem Statement Submission Form

Sec No-4	Team No-2	Project Title Flight Search & Booking System
Team Lead Roll Number		2520030157
Team Lead Name		SAI SURENDRANATH PENDYALA
Team Member Roll Number		2520090186
Team Member Name		SAI AJITH REDDY

1. Abstract

This project aims to develop a Flight Search and Booking System that allows users to search for flights, select seats, and complete bookings through an interactive web interface. In today's digital world, online travel booking systems are essential for providing quick and efficient services to users. However, many existing systems are complex and not user-friendly.

The proposed system provides a simple and efficient solution where users can enter source, destination, and travel date to search available flights. The system displays flight options with details such as price, timing, and availability. Users can select seats, view booking summaries, and proceed with a simulated payment process. After booking, a digital ticket is generated for confirmation.

The project also includes user authentication, booking history, and basic admin functionalities to manage flight data. The system is designed using modern web technologies to ensure responsiveness and smooth user experience.

This project helps in understanding real-world application development by integrating frontend, backend, and API concepts, making it a complete full-stack solution.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Signature
Flight Search	2520030157	SAI SURENDRANATH PENDYALA
Seat Selection	2520030157	SAI SURENDRANATH PENDYALA
Booking System	2520030157	SAI SURENDRANATH PENDYALA
User Authentication	2520030157	SAI SURENDRANATH PENDYALA
Booking History	2520030157	SAI SURENDRANATH PENDYALA
Admin Dashboard	2520090186	SAI AJITH REDDY
Payment Gateway Mock	2520090186	SAI AJITH REDDY
E Ticket Generation	2520090186	SAI AJITH REDDY
Notifications	2520090186	SAI AJITH REDDY
Filters and Sorting	2520090186	SAI AJITH REDDY

3. Module Details

(Explain the responsibility of each student concerning their assigned module.)

The student is responsible for designing and implementing all modules of the project. The flight search module handles user input and displays available flights. The seat selection module allows users to choose seats dynamically. The booking system manages booking confirmation and payment simulation.

The authentication module ensures secure login and registration. The booking history module stores and displays past bookings. The admin dashboard allows management of flight details and user data.

All modules are integrated to provide a smooth and complete user experience.

4. Frameworks / Platforms / Software Used

(List the frameworks, libraries, platforms, or tools you plan to use.)

HTML5, CSS3, JavaScript (ES6+), React.js, Node.js, npm, Postman (API Testing), MySQL (optional), REST APIs, Express.js, Axios, PReact Router, Context API / Redux, LocalStorage, Bootstrap / Tailwind CSS

Guide Name and Signature (remarks if any) : Dr. NEELIMA GOGINENI
